Docket E-00000xx-13-0214

ORIGINAL

Chairman Stump and Commissioners,

My company is an Arizona corporation that provides training services and products all over the state in support of energy efficiency in general and the Arizona energy efficiency standards and programs in particular. We are a small private company currently employing 5 full time people and several more part time sub-contractors.

The elimination of the current Energy Efficiency standards in Arizona would severely affect our business and our customers local businesses, causing job losses for us and many other Arizona companies.

We see first hand how successful the current program is and feel it should be expanded and improved rather than eliminated. Arizona is saving energy, creating jobs and saving every ratepayer money with the current program.

Commissioners I respectfully urge you to:

- Continue the existing Energy Efficiency Standards for Arizona
- Do not change to, or add, the RIM Test for evaluating the effectiveness of the program

Sincerely,

Jerry Lawrence  
Education Director  
ThermalStar
